»The real **alternative** to natural stone and tiles!«

It's so easy!

Apply adhesive according to instructions, lay CERAMIN[®] Vario. Simply cut to size using a cutter knife or laminate cutter.

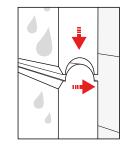

Clean substrate and pretreat properly. Existing tiles do not have to be removed, simply paste over them.

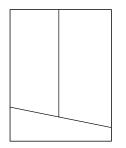

Clean – ready. No filling of joints, no further treatment necessary.

Lay and it's done ...

Water-repelling profile system

Elegant micro-joint

... joint filling unnecessary!

Format collection 40/120 [392x1,180 mm]

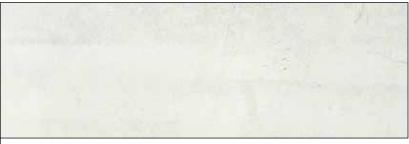

Art.-Nr. 44076 Oil shale

Easy to clean

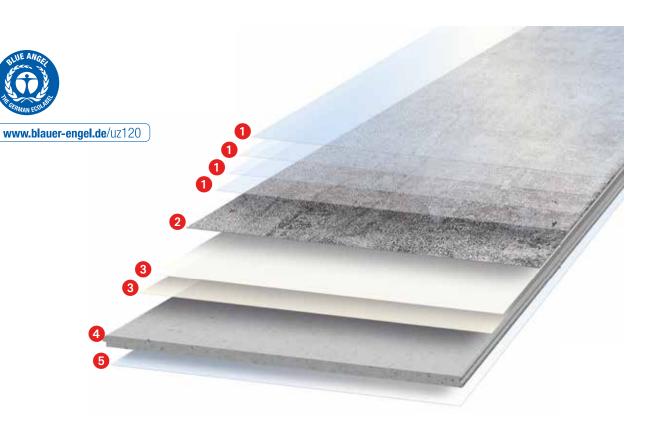

All the advantages of a ceramic tile and so much more ...

- Water-repellent profile system
- Elegant micro-joint, no joint filling necessary
- Easy to lay, without loud machines
- Cut to size using a cutter knife or laminate cutter
- Far less heavy than a ceramic tile
- Large format tiles easy to lay
- Easy adhesive bonding on walls and floors
- Simply paste over old tiles
- Waterproof and easy care
- Silent, dust-free laying
- As durable as a ceramic tile
- Dimensionally stable and heavy duty

Build-up

- Multi-layer Sealtec surface seal
- 2 Digital print decor layer
- **3** 2 primer coats

 CERAMIN[®] carrier board with water-repelling profile system

Recommended tools and accessories

Standard substrate: 400–500 g/m²

- Adhesive spreader B3 Art.-Nr. 43352
- Rough substrate: 500–600 g/m²

Stainless steel end Art.-Nr. 43347

Art.-Nr. 44944 15 kg container Art.-Nr. 44945 5.5 kg container

 MultiConnect Art.-Nr. 44946
290 ml cartridge

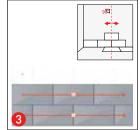

Please follow the particular use instructions given by the adhesive manufacturer on the packaging.

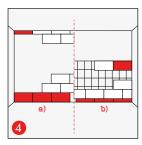

Do not remove the adhesive from the tub directly with the spreader. Use a small trowel to remove the adhesive from the tub and then transfer it onto the adhesive spreader.

Professional tips for laying CERAMIN[®] Vario

(1) **Tools:** Pencil, measuring tape, spirit level, plumbline, cutter knife, CLASSEN MultiConnect tile adhesive, adhesive spreader, end profile.

(2) Firm, stable substrate: permanently dry, clean, free from dust, oil and grease, loose parts and old, non-waterproof coatings and adequately level and rigid. Apply sealing coat, if necessary with sealing tape, in wet rooms and on moisture-sensitive substrates.

(3) Laying on the wall

Mark the middle of the wall with a plumbline or laser, align the tiles with this marker. Edge tiles should be at least half a tile wide. Recommendation: Lay tiles in brick bond. Advantage: makes the room seem larger.

(4) Wall-high

- a) Without a defined height of the tiled area: start at the bottom with whole tiles (allow for the floor build-up).
- b) If height of the tiled area is fixed: end with whole tiles at the top. To do this, determine the height of the tiled area, cut the bottom tiles to fit if necessary, lay starting with the bottom row.

(5) Full surface bonding in wet areas: Position the CERAMIN® Vario tile in the CLASSEN MultiConnect adhesive bed with a slight sliding movement and align. Note: The tongue and groove profile must be completely interlocked.

(6) Partial bonding outside of wet areas

(e.g. WC, kitchen, etc.): Apply CLASSEN MultiConnect from the cartridge onto the back of the CERAMIN[®] Vario tile and press the tile onto the wall.

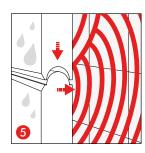

Outside corners are formed using standard quality profiles.

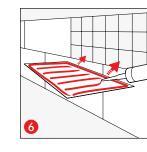

(7) Seal recesses and cutouts for pipes and fitting connections with CLASSEN MultiConnect (cartridge) or matching colour silicone.

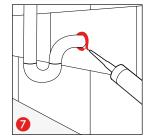

(8) Laying on the floor

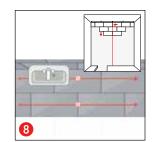

In rectangular rooms stretch a plumb line centrally and parallel with the side walls. Starting at a joint or with the middle of the tile on the plumbline, align the first row with the plumbline. Lay further tiles along the wall.

Ensure continuous joints if laying tiles in adjacent rooms. Position 5 mm expansion joints under the door leaf, also note expansion joints in the screed.

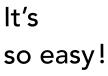

Detailed laying instructions are enclosed with each pack of CERAMIN[®] Vario.
